- Basic PC skills needed for use of SRS Femida, no speed typing experience needed
- Customizable hotkeys for recording, playback
- Stationary and portable solutions of the court recording system
- No additional downloads required to playback records
- Easy installation, training and operation

❑ Why choose Court Recording System SRS Femida?

The Court Recording System **SRS Femida** is a comprehensive solution providing legitimacy of recording, creation of minutes of proceedings and duplicating of all documents and corresponding records.

The Court Recording System **SRS Femida** offers digital recording, annotation, playback, transcribing, minutes creation and editing facilities that have been designed to support and enhance current court procedure.

The Court Recording System **SRS Femida** is easy to use, which in turn substantially facilitates the process of preparation of minutes of proceedings due to a special editor with application of unified and customizable templates of court proceedings. The special editor carries out complete fixation of all court proceedings in chronological consecution (event log) and simultaneous synchronization of these proceedings to corresponding audio and video segments of records. The synchronization of audio and video to text gives an instant access to the required court event. If needed a court secretary can create a verbatim transcript of the total trial or its fragment. While reading this verbatim transcript one can simply click on any word in the text and the playback of the corresponding passage of the record will be automatically launched. This is an undeniable advantage of **SRS Femida** in comparison with analogous court recording systems.

Within the Court Recording System **SRS Femida** all channels can be played back together giving a verbatim record of the proceedings or single channels can be isolated during playback for review.

Transcribing mode with foot pedal playback control function and speech speed variation without pitch affecting helps the court secretaries to prepare minutes of proceedings more comfortably and effectively.

The Court Recording System **SRS Femida** is compatible with standard hardware, but for better results Special Recording Systems, Ltd. produces high-quality microphones and multi-channel microphone preamplifiers.

The court proceeding materials (audio and video records, reports) can be played back and viewed from media at any multimedia PC without installation of additional software.

The full-functional installation of the systems, their technical support and servicing are provided in any region due to the available dealers' networks. The installation, maintenance of the equipment for work, special software will be carried out by highly qualified engineers, who will prepare the system for work, accomplish its testing, train the personnel and perform the test court proceeding.

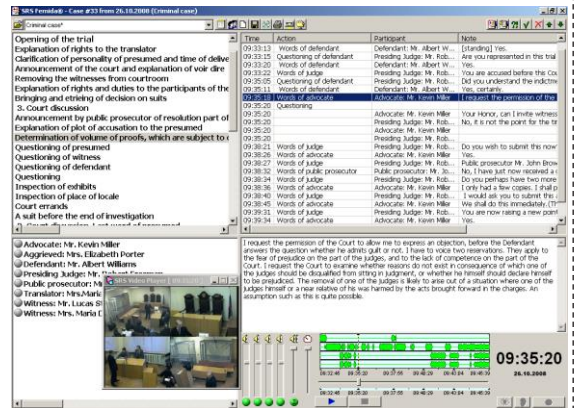

The Court Recording System **SRS Femida** cuts costs, saves time consuming, streamlines resources and offers an accurate and reliable courtroom solution to guarantee transparency of court proceedings.

❑ Additional possibilities with Special Recording Systems, Ltd.

Special Recording Systems, Ltd. offers the following additional systems for provision of up-to-date technological environment for court proceedings:

- "SRS Anonymity System" which excludes witnesses' recognizability by voice and video
- "SRS Report" – real-time transcribing system
- "SRS Connect" – video conferencing system in courts for remote court proceedings
- "SRS OpenCourt" – system of open broadcasting of court proceedings over Internet

Special Recording Systems, Ltd. performs "turn-key" solutions for courtrooms comprehensive equipping with application of the Court Recording System **SRS Femida** and supplementary high-tech systems providing courthouses work efficiency.
